EDUCATION

University of South Florida (USF)
Bachelor of Science in Computer Science
GPA: 4.00/4.00

Expected Graduation: May 2027
Tampa, FL

SKILLS & CERTIFICATIONS

Languages: Java, Python, C, C++, C#, SQL (MySQL/MSSQL/PostgreSQL), JavaScript, HTML, CSS, Arduino, COBOL
Frameworks: React, Framer, Next.js, Express.js, Node.js, Apache Hadoop, Hive, Pig, Spark, Docker, Supabase
Developer Tools: Git, GitHub, VS Code, Visual Studio, AWS, Microsoft Office, Linux, Unix, Command Line Interface
Libraries: pandas, NumPy, matplotlib
Honors and Awards: Dean's List (Fall 2024, Spring 2025, Fall 2025, Spring 2026), USF Presidential Scholarship (August 2024-Present), Microsoft Office Specialist 2016 Master (May 2022-Present)

EXPERIENCE

Software Developer Intern | *React, Next.js, Python, Java, C#* June 2026 – August 2026
Booz Allen Hamilton *Fort Walton Beach, FL*

- Selected as **1 of 140 interns nationwide from 10,000+ applicants** for Booz Allen Hamilton's Summer Games; collaborated in a **5-person Agile engineering team** running weekly sprints to build a mission-planning analytics platform for **live, virtual, and constructive (LVC)** training environments, reducing mission reconstruction time by over **98%**
- Built a full **data-processing pipeline** that ingests **DIS PDU** mission logs recorded through **DIScord** up to **500 MB**, along with **Environment Generator** outputs captured via a **custom C# MACE plugin**; transformed these files into structured **JSON** to enable analysis, visualization, and integration with a **local LLM** for mission insight generation
- Developed a frontend that rendered **graphs, tables, timelines, and geospatial maps**, and integrated a **local Gemma-4 LLM** trained per-file to generate mission insights; managed workflow through **Jira** and collaborated via **GitHub** for version control, reviews, and **CI/CD**, allowing reconstruction of complex mission scenarios within **3 minutes**

LEADERSHIP

Full-Stack Web Developer October 2025 – Present
Society of Aeronautics and Rocketry (SOAR) at USF *Tampa, FL*

- Rebuilt the **SOAR website** using **React** and **Next.js**, deployed on **Vercel**; implemented **16 route pages** and **21 custom React components**, with **3 automated, daily GitHub Actions** workflows keeping live metrics in sync
- Collaborated with **marketing and PR leadership** to deliver a visually consistent, accessible, and **mobile-optimized web experience**, improving navigation and overall usability
- Built **interactive, user-focused** web features, including **multi-calendar scheduling**, a media hub, and a **streamlined contact/registration workflow**, and resolved **layout and responsiveness** issues across the platform

Director, Outreach + Full-Stack Web → Digital Assets November 2025 – Present
Society of Hispanic Professional Engineers (SHPE) at USF *Tampa, FL*

- Led ongoing **development and performance optimization** of **SHPE USF's** official **Next.js** website on **Vercel**, expanding backend capabilities and launching e-commerce flows for online chapter merchandise purchases; supported **300+ monthly visitors** and drove a **200%+ increase** in site viewership
- Architected a **dynamic photo gallery** by leveraging **Supabase's RESTful APIs** to fetch and render media in real-time, while developing secure admin workflows that utilize **API calls** for seamless **CRUD operations**, media management, and automated publishing directly from the site interface
- Drove external relations strategy for **SHPE USF's spring hackathon** by conducting partner outreach of **40+ professionals/week**, and strengthening long-term industry partnerships to increase funding opportunities

PROJECTS

Full-Stack Weather Application | *HTML, CSS, JavaScript, Express.js, Node.js*

- Built a **full-stack global weather application** that lets users view **current forecasts** for over **200,000 cities**, providing a clear, intuitive experience **across devices**
- Developed the application using **JavaScript, HTML, CSS**, and a **Node.js/Express backend** on **Vercel**, integrating **OpenWeather's geocoding and daily APIs**, **fuzzy autocomplete search**, **geolocation**, persistent favorites, share-to-clipboard, and a **cron-driven newsletter system** with robust error handling
- Delivered a **fast, accessible** forecasting platform that returns results in under **1 second**, maintains **near-100%** reliability, supports **personalized** features, and provides **automated** daily updates for subscribers
